

ADVANTIV PROVIDE FREE OF CHARGE MOTOR ENERGY EFFICIENCY SURVEYS

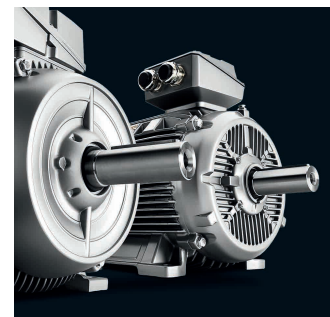

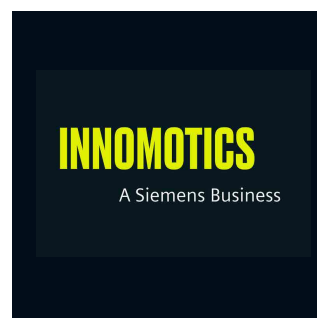

As part of Advantiv's Energy Efficiency Services we are offering clients a free of charge survey of their existing AC Low Voltage Induction motors, to advise on energy savings that could be made by upgrading to premium efficiency motors.

As an Innomotics (Siemens rebranded) Partner we can, not only assess your current drives to give accurate cost savings and ultimately the payback financials by upgrading, but also provide the added benefit of supplying a branded product of the highest quality with a trusted legacy of more than 150 years of Siemens engineering expertise, that has always been the backbone of reliable motion for industries and infrastructure worldwide.

As part of your company's ISO14001, ESOS or simply sustainability requirements, reducing energy consumption is not only required but in the current economic climate often a necessity to meet your budget and profit forecasts.

Advantiv can help you meet and hopefully surpass these obligations without any initial cost to your business. You in essence have nothing to lose by engaging with our Energy Efficiency Team to find out how we can help you meet these targets and become more environmentally friendly.
