

CAMOZZI SCRAPER SEAL PNEUMATIC CYLINDER

Rod Scraper

The principal function of the Camozzi scraper seal is to keep the cylinder piston rod clean and free from the build-up of ice, resin, cement, clay and other dirt to extend the service life of your product and ultimately prevent unnecessary downtime for your machinery.

A chrome plated Stainless Steel AISI 420B piston rod is used to offer superior resistance towards corrosion compared to typical C45 steel chrome plated alternatives.

The Camozzi scraper seal cylinder is suitable for use in various other industry sectors, such as: timber handling, refrigerated/chilled transport, the cement industry, chemicals and food & beverage.
